

Traffic Counts

Traffic counts were undertaken on Tuesday the 9th of September 2025. All arms around Sandymount Green were counted for all modes. The counts showed that on the location being examined, the eastbound movement between 15:00 and 16:00 was the busiest movement with 13 more cars traveling in that direction when compared to the highest west bound (towards the city centre) movement of 70 cars between 09:00 and 10:00.

Overall, the volume of traffic is low. East bound cars which currently use this route will be able to circulate around the green in an anti-clockwise direction without having an adverse impact on other routes due to the low volume of diverted traffic.

The flow of traffic if one way should be as per below:

Westbound	ESC	P/C	M/C	CAR	TAXI	LGV	HGV2 Axle	HGV3 Axle	HGV4 Axle	HGV5+ Axle	DUBLIN BUS	OTHER BUS
